ReadySeeGo®

Faster, Better Security Checkpoints

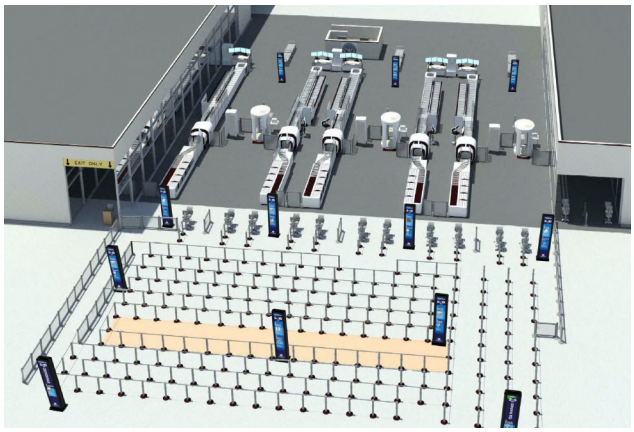
The Solution: ReadySeeGo® Security Checkpoint

Synect worked with the Transportation Security Administration (TSA) Innovation Task Force (ITF) to design a **ReadySeeGo®** Security Checkpoint program for use at any airport. This program helps inform passengers of how best to prepare for going through the security checkpoint, divest of personal items, and navigate the environment. It also replaces traditional print stanchions and lessens TSO interactions with the public. This program is TSA-vetted and is distinguished by high-resolution digital content that supports passenger screening with dynamic instructions to address each stage of the checkpoint security screening process.

The Content: Instructions and Entertainment

The custom content eases passengers through the checkpoint with visual instructions and infotainment. It addresses each stage of a passenger's progress. A TSO using a tablet can easily modify states such as K9 teams in use and TSA PreCheck®.

The Deployment: Precise Positioning



Queue **Divest** **TDC** **Recomposure**

The Technical Solution: ReadySeeGo®

ReadySeeGo® uses **Synect's Passenger360™** content management system (CMS). This powerful solution has been engineered for seamless 24x7 operation, robust content playback, auto-recovery functionality, flexible data integrations, and more.

The remote management capabilities, content synchronization, automated scheduling, and guaranteed 99.9% uptime make **ReadySeeGo®** the best solution for mission-critical visual communications.

Easy to place and easy to move, **ReadySeeGo®** works in any environment and blends into security queues without impeding passenger flow.

- Footprint: 90.7” T x 26” W x 22.5” D
- Weight: 336lbs single sided / 381lbs dual sided
- Power: 100V outlet
- Network: Wi-Fi or networked
- Certification: CSA & UL
